

Accelerated Phlebotomy

Certificate available

North Georgia Technical College's Accelerated Phlebotomy Technician certificate program educates and prepares students to collect blood and process blood and body fluids. Phlebotomy technicians typically work in concert with medical laboratory personnel and other healthcare providers in hospitals and other healthcare facilities. This is accomplished through academic and occupational courses as well as hands-on training in human anatomy; anatomical terminology; venipuncture; and clinical practice. The certificate program can be completed in one semester; therefore, graduates are quickly prepared to enter the workforce.

Available on the Blairsville and Clarkesville campuses

NGTC's Accelerated Phlebotomy certificate program is designed to prepare students to sit for the American Society of Clinical Pathologists (ASCP) certification examination and to work in a high-demand career. NGTC provides excellent growth opportunities in this field with most Accelerated Phlebotomy Technician students receiving full-time job offers from their clinical site before completion. Students also have the option to enhance their career by completing NGTC's Medical Laboratory Technology degree program.
